

Proyekta
DATA SOLUTIONS

Financial Intelligence Beyond Traditional Analytics.

We combine quantitative finance, forensic analytics and statistical modeling to detect hidden risks, measure enterprise value and support evidence-based business decisions.

Business Valuation

We determine what a company is truly worth — not what the market hopes, not what management projects, and not what a spreadsheet casually suggests.

Forensic and financial analysis

We deconstruct financial structures to uncover distortions, hidden fragilities, and structural risk.

Credit Risk Analysis & Credit Limit Structuring

We determine true borrowing capacity through a quantitative framework that integrates earnings quality diagnostics, insolvency probability modeling, and free cash flow sustainability assessment.
